

## Remote Controller v1.8.0

### DJI Go & DJI Go 4

DJI has branched off its Go app into 2 versions, from this point forwards you should use the correct app for your model, while the later versions of the Go App V3.1 do support the Mavic Pro and P4 its advised to move over to Go 4.0 as per below.

Use DJI Go V3x for the following products

Phantom 3 Series

M100/M600/LB2

Use DJI Go 4x for the following products

Phantom 4 Series including the P4 Pro

Mavic Pro

Inspire 2

## KNOWN ISSUES

### FPV BLOCKING AND POOR FEED AFTER RC FIRMWARE V1.8

A number of users have reported very bad live feed link after updating the RC firmware to V1.8, this appears to affect users with the HDMI board fitted more than others but its pretty random.

**FIX:** Currently the only solution is to downgrade the RC back to V1.6 firmware and this should resolve your issues, You may also need to delete DJI Go, Reboot the smart device then download DJI Go again.

Currently DJI had not release a fix for this issue.

## FIRMWARE UPDATE PROCESS
