

when I turn on the remote control

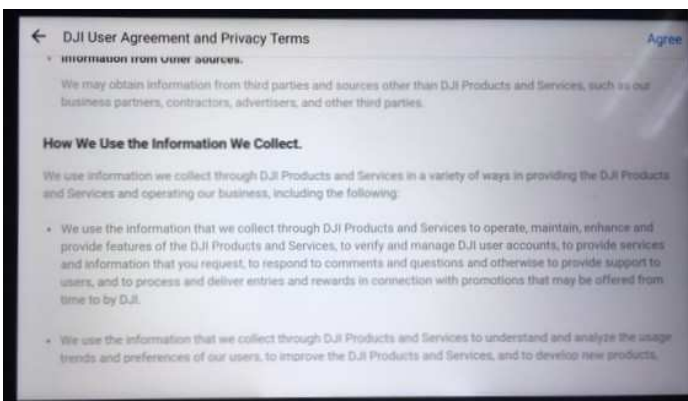

The application is initialized, As it was restored I have to follow these steps, I select the language and I give in next

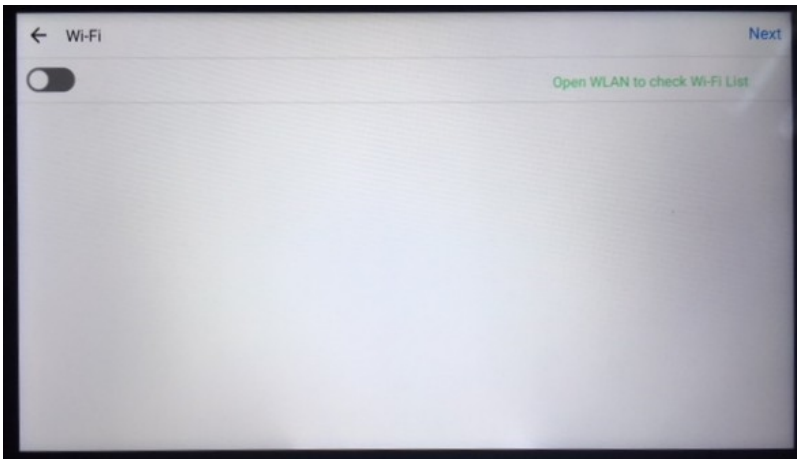

The application welcomes me and I put next

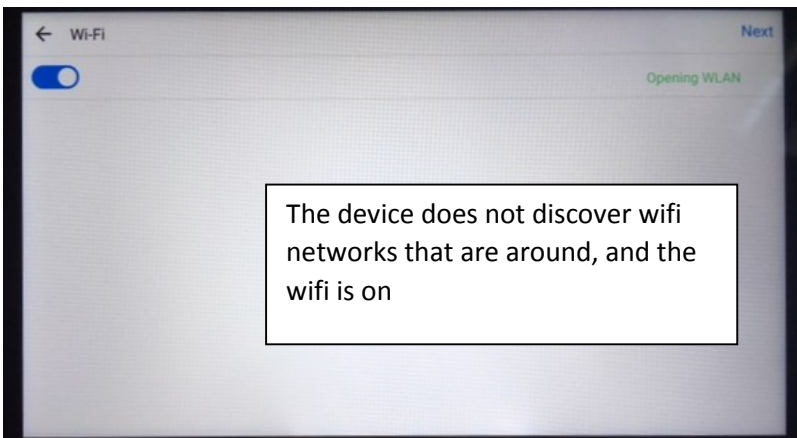

I accept the terms of the contract and I click in agreement

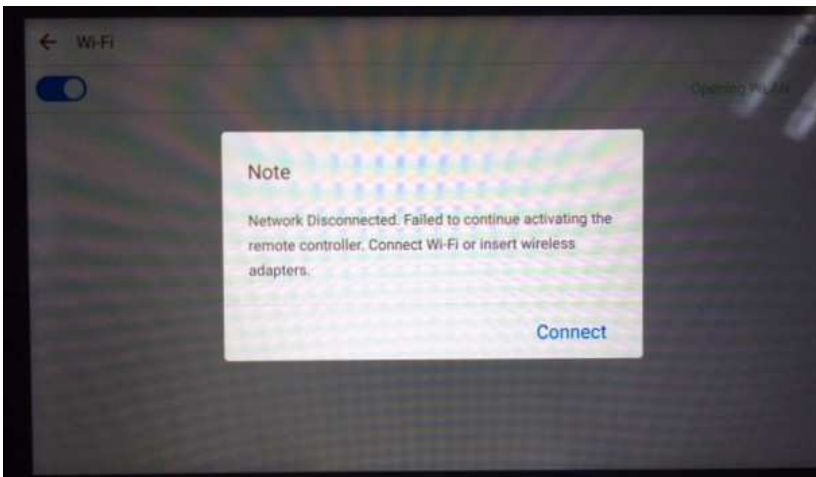

This is where I open or activate the tab to discover wifi networks

As you can see it does not detect any wifi signal in order to complete the registration

As it does not detect any Wi-Fi signal I put the next and get this error

I can not move forward anymore because I can not enter my user account and password because there is no network that discovers wifi to authenticate my account.
